

I ask the FCC not to allow Broadband to be carried over power lines. The HF frequencies are already filled with QRM which the FCC has allowed to pollute the bands. Please do not allow anymore noise and garbage to fill the HF Bands. I , like many people, rely on Shortwave to recieve news and information. By allowing Broadband over power transmission cables, an important source of information will be forever lost to the American people. Please represent the people by not allowing this to happen. The FCC is well known as the agency for sale to the highest bidder. Please , for once, think of the people and not the corporation with the biggest pocket book.

Thank You
